

Updating, Testing, and Sunsetting Agents

Eman Hassan

Co-Founder & CTO of Aleoop

[linkedin.com/in/eman-m-hassan/](https://www.linkedin.com/in/eman-m-hassan/)

Planning Agent Updates and Checkpoints

Common Update Triggers

Business requirements change

New models or APIs available

Data shifts or feedback signals

Compliance or security needs

Cadence for Reviews

**Weekly: High-risk or
beta agents**

**Monthly: Mid-impact
agents**

**Quarterly: Stable
agents**

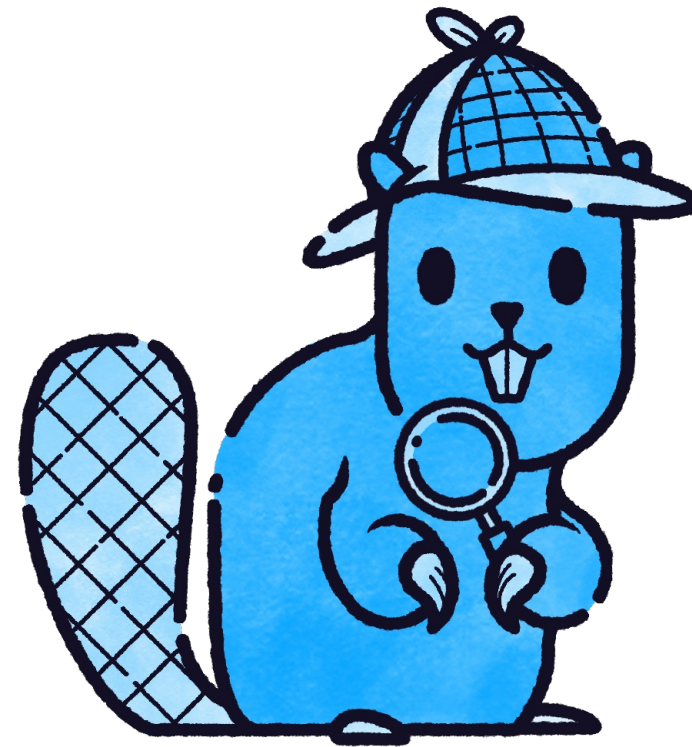

Defining Checkpoints

Prompt logic

**Output accuracy
tests**

**Drift detection
scripts**

**Uptime and
usage metrics**

Monitoring Agent Behavior over Time

Key Metrics to Monitor

Retry rate

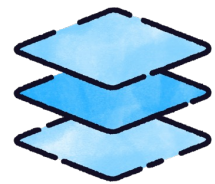

Token count and cost

Confidence score (if available)

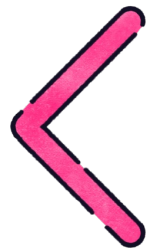

Unanswered or failed queries

Logging and Observability Tools

PromptLayer

OpenTelemetry

Custom logging middleware

Azure Monitor/Datadog

Detecting Behavior Drift

**Before vs. after
outputs**

**Semantic similarity
drop**

**Response time
change**

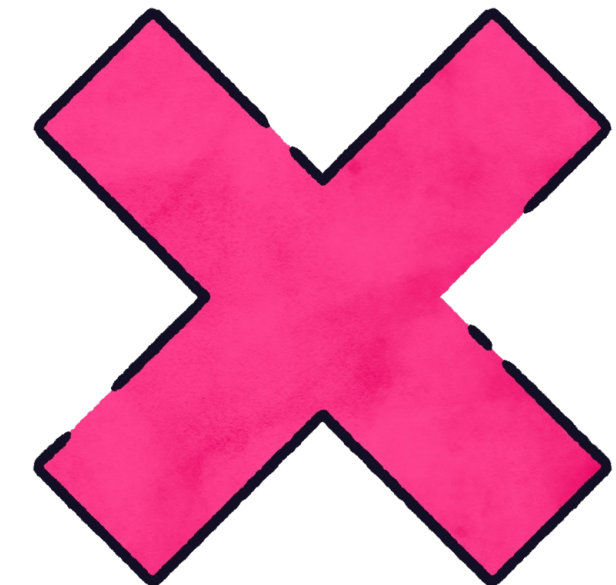

Alert Threshold Examples

20% failed matches

**50% tokens used over
baseline**

**< 60% feedback
satisfaction**

Effective Monitoring Plan

Clear baselines

Defined thresholds

Built-in drift detection

Actionable responses

Fallback Logic and Routing to New Agents

Why Fallback Matters

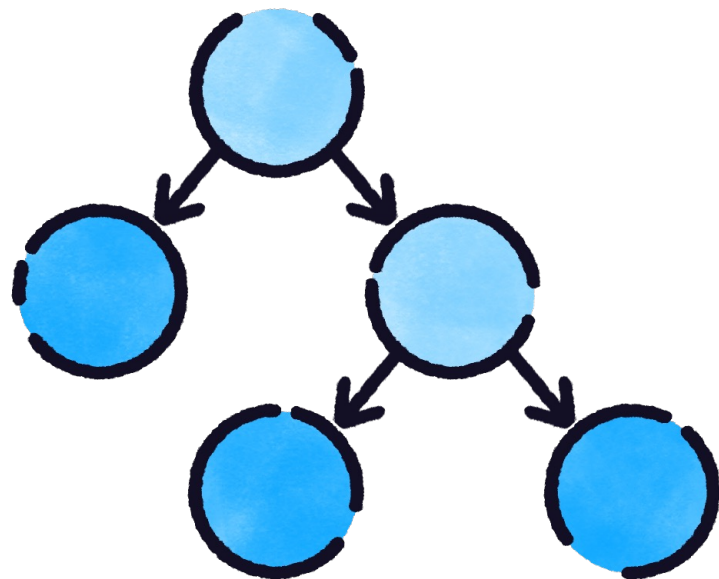

Improves reliability

Prevents user drop-offs

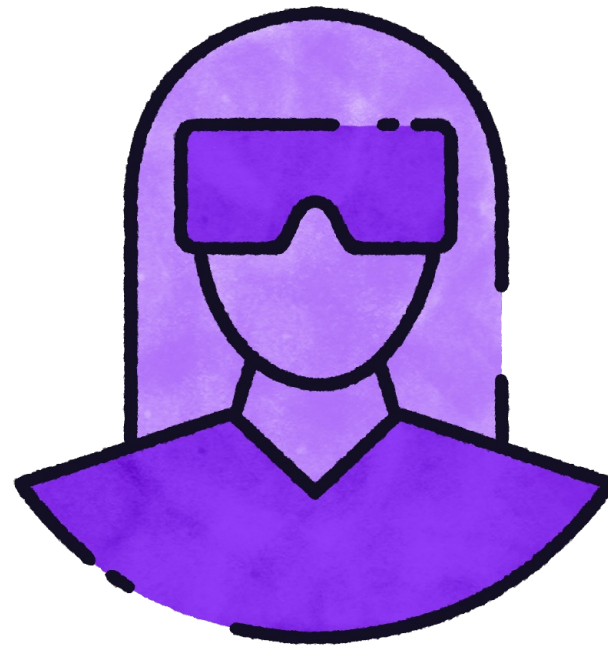

Helps in A/B testing or rollouts

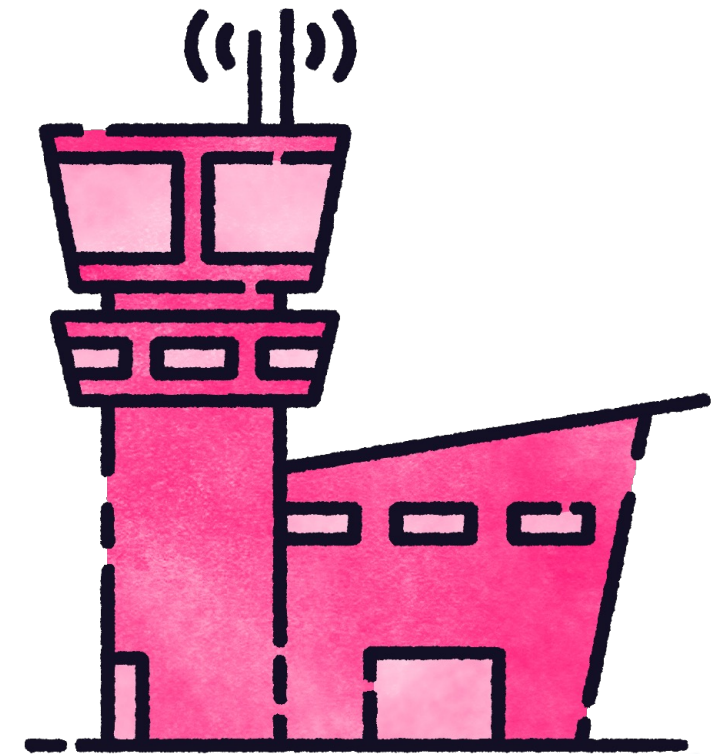

How Routing Works

By task type

**By confidence score
threshold**

**Based on failure
detection**

Fallback Config Example

```
fallback_agent: hr_agent_v2  
min_confidence: 0.65  
fallback_reason: "default_response"
```

Routing Patterns to Avoid

Infinite loop fallback

**Sending to outdated
agent**

**Silent failures
without logs**

Fallback Logging Output

Resilient Fallback Strategy

Well-defined triggers

Assign routes intelligently

Log everything

Avoid common pitfalls

Writing a Sunset Policy with Stakeholder Communication

When to Sunset an Agent

**Redundant
functionality**

**Usage < 5% over 30
days**

**Replaced by newer
model**

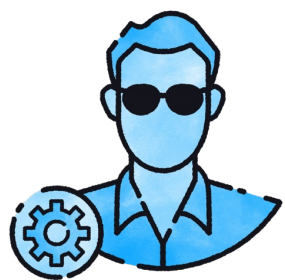

Stakeholders to Involve

DevOps and Infra

QA team

Product owner

End users

Sample Policy Template

Timeline

Communication plan

Deactivation checklist

Handoff plan

Communication Channels

Slack

Email newsletter

Internal status board

GitHub changelog

**"Globomantics Assistant
v1.2 will be deprecated by
August 1, 2025. Please
begin migrating to v2.0..."**

Putting It All Together

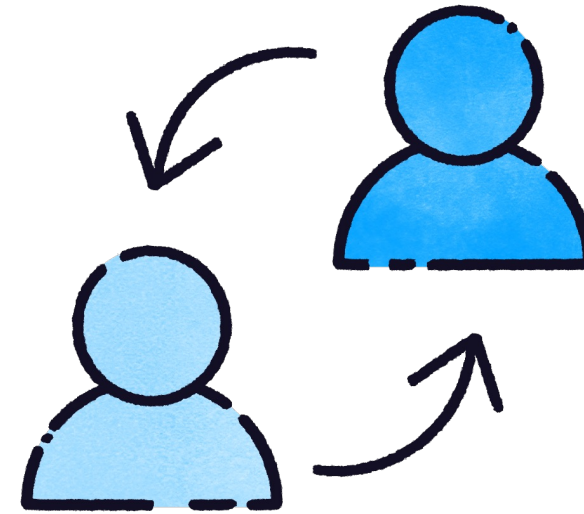

Lifecycle Recap

Plan updates

**Monitor
performance**

**Fallback when
needed**

**Sunset
responsibly**

CI + Git + Logging Setup

Manifest under version control

Logs monitored via dashboards

Tags used to mark releases

Final Checklist

Update schedule

Logging in place

Fallback ready

Sunset policy drafted

Stakeholders notified

**Metrics dashboard
live**

**Treat your agents like
evolving software with
planning, observing,
responding, and retiring
with care.**

Course Summary

Understand how agentic AI systems evolve over time

Build structured lifecycle strategies

Track agent versions

Monitor agent performance

Sunset agents responsibly

Thank you for your time!
